EDUCATION

RUTGERS BUSINESS SCHOOL

Bachelor of Science in Finance

GPA: 3.7 / 4.0 | *Relevant Coursework:* Financial Accounting, Financial Management, Microeconomics, Macroeconomics

Certifications: Bloomberg Market Concepts (BMC)

New Brunswick, New Jersey

Expected May 2028

PROFESSIONAL EXPERIENCE

PLANNING ALLIANCE

Financial Analyst Intern

Woodcliff Lake, New Jersey

June 2026 - August 2026

- Reconciled and consolidated 5-10 custodian statements per client household across ~\$50M in client assets, using Excel and the Bloomberg Terminal to structure holdings data into the decks presented in advisor meetings
- Reverse-engineered the S&P 500 Quality-Value-Momentum index (SPXQVMUT) to derive constituent weights Bloomberg does not publish, rebuilding S&P's methodology in Excel: rank-based normal-score factors, an 80/120 incumbent buffer, and a water-fill capping solver
- Proposed automating multi-custodian client onboarding after a discussion with the Managing Director on introducing AI to the firm; independently designed and built the resulting system (PARS)

ROCKIT ALERTS

Part-Time Researcher

Lyndhurst, New Jersey

June 2025 - July 2025

- Developed signal-generation logic for a systematic strategy, applying regression and anomaly detection to five years of SPY and AAPL daily price data
- Built Excel back-testing frameworks evaluating roughly 20 signal variants and optimizing execution logic

QUALQUANT SIGNALS

Data Analyst Intern

Lyndhurst, New Jersey

June 2024 - August 2024

- Synthesized consumer data for a PepsiCo innovation project, ranking roughly 15 product concepts by projected demand
- Constructed market segmentation models across six customer segments to reallocate Best Buy's marketing spend

TECHNICAL PROJECTS

PARS - Portfolio Aggregation & Reconciliation System

Architect and Sole Developer

Python, React, Bloomberg

June 2026 - Present

- Built a full-stack platform (Python/FastAPI, React/TypeScript, 470 tests) that automates the 4-5 hour manual statement cycle wealth managers repeat for every client, consolidating multi-custodian PDFs into one reconciled household portfolio
- Automated the advisor's client-ready deliverables, generating a Bloomberg-linked Excel workbook with live =BDP pulls and a branded presentation deck in place of manual re-keying and slide assembly
- Engineered the reconciliation engine to foot, cross-foot, and identity-check every statement and trace each figure to its originating account and custodian, routing breaks to analyst review rather than modeling over them
- Designed a local security master with provenance ranking that learns confirmed CUSIP mappings, reducing manual identifier review with each additional client engagement

GNOSIS - Executive Intelligence Engine

Sole Developer

JavaScript, Claude API

May 2026 - Present

- Built a three-round Delphi-method simulation engine that convenes synthetic expert panels on a research question, driving each round to convergence and surfacing where private conviction diverges from publicly stated position
- Engineered the statistical validation layer, computing t-statistics, F-tests, and p-values across panel segments so that every finding carries a significance measure
- Shipped as a self-contained browser application that turns a research question into an executive brief of ranked actions, confidence scores, and risk triggers

ADDITIONAL INFORMATION

- **Technical Skills:** Advanced Excel (Macros, VLOOKUPS, Pivot Tables), Bloomberg Terminal (BDP/BDH, PORT), Financial Modeling, DCF Modeling, Back Testing Frameworks, Python, SQL, PowerPoint
- **AI & Automation:** LLM application development (Anthropic API), prompt engineering, document-extraction and retrieval pipelines, AI-assisted workflow automation
- **Languages:** English (Fluent), Hindi (Intermediate), Gujarati (Intermediate)
- **Interests:** Music Production, Behavioral Neuroscience, Philosophy, Soccer (FC Barcelona), DJing
